(a) Local transport in a thin layer
normal loss coordinate $B - \nu$
$O(\varepsilon)$
$B = \nu$
0
mass $O(\varepsilon)$ × distance $O(\varepsilon)$
local transport cost $O(\varepsilon^2)$
position along the tail surface
(b) Cancellation of full marginal discrepancies
compensation cost $\gamma_i \int |\Delta_i(q)|\, dq$
signed marginal CDF discrepancy
0
local discrepancy Δ_i
remaining plan: $-\Delta_i$
ℓ_i
r_i
coordinate value q
