
Positive corner demand

$|E_\delta| \geq \delta^2/2, \quad y - x \geq \Delta/2$

$M_\delta \geq \frac{\lambda\Delta^2}{16\beta}\delta^2$

Available return capacity

$|R_i| \leq \delta^2/2, \quad |x - y| \leq \delta$

$N_1 + N_2 \leq \frac{\Lambda}{12\beta}\delta^4$
